Aerosol and Cloud Experiments in Eastern North Atlantic (ACE-ENA)

ARM/ASR Joint User Facility PI meeting
May 4th, 2016, Vienna, Virginia
When and where

1st IOP (summer): 80 flight hours, June 15-July 25, 2017
2nd IOP (winter): 80 flight hours, January 11 – February 20, 2018
What are the contributions from different sources, including sea spray aerosol, long-range transport, and new particle formation? What are the seasonal variations of the characteristics and contributions of various sources?

How does removal of CCN by droplet coalescence control the CCN population in the MBL for representative cloud regimes?
Effects of Aerosol on Clouds and Precipitation

- How can ground based Lidar and CCN measurements be used to better infer CCN concentration at cloud base?
- How does the CCN budget affect cloud microphysics? Do high CCN concentrations lead to increased cloud droplet concentrations and suppressed precipitation? Is precipitation susceptibility to CCN weaker in the deep open cells observed in the Azores?

(Dong et al., 2015)

Decoupled boundary layer

Mann et al. (2014)
Cloud Microphysical and Macrophysical Structures, and Entrainment Mixing

- What are the mesoscale variabilities of cloud microphysics and vertical velocity and how do they influence drizzle mesoscale organization and rates? What are the thermodynamic and spatial characteristics of cold pool and how do they relate to the properties and mesoscale organizations of cloud and drizzle?

- What are the relationships between the entrainment rate, thermodynamic stability, wind shear above cloud top, and coupling structure below cloud base? What is the prevalent entrainment mixing mechanism, and what are the controlling factors? What are the microphysical effects of entrainment mixing?

An example showing MBL clouds over the SE Pacific during EPIC (Bretherton et al., 2004)
Advancing Retrievals of Turbulence, Cloud, and Drizzle

- Validating and quantifying the uncertainties in turbulence, cloud and drizzle microphysical properties retrieved from vertically pointing observations
- Validating and improving 3-D cloud and drizzle retrievals from scanning radars

Fielding et al. (2014)
Model Evaluation and Processes Studies

- Comparison of the airborne data with predictions of global models using “nudged” or “specified” meteorology and local simulations with LES and WRF-Chem models.

- Examining the CCN budget terms and processes driving the vertical structure and mesoscale variation of aerosol, cloud, and drizzle fields using validated/constrained GCM and LES model simulations.
Synergistic Activities

- Measurements at the ENA site!
- North Atlantic Aerosols and Marine Ecosystems Study (NAAMES) (NASA EVS-2 project 2015-2019)
- Deployment of Leibniz Institute for Tropospheric Research Helicopter-borne measurement payload (ACTOS) in the summer of 2017
- Measurements of (free tropospheric) aerosols at PICO mountain observatory in the summer of 2017 (by Leibniz Institute for Tropospheric Research)
