Summary

- HSRL-2 products are available from the TCAP ftp archive site
- These products include:
 - Quick look images of many parameters and flight track
 - Google Earth (kmz) files showing aerosol backscatter ratio and flight path color-coded by AOT
 - Data files in hdf5 format
- Data files include:
 - Aerosol backscatter, extinction, depolarization, AOD (532 nm)
 - Aerosol backscatter, depolarization (1064 nm)
 - Flight parameters (lat, lon, time, etc.)
- Have produced preliminary retrievals of aerosol optical and microphysical characteristics
 - Not archived but available from LaRC upon request
 - Currently working with G-1 data to assess retrievals
 - Seek additional results for further assessments
- Currently working on producing ML heights

532-nm Aerosol Scattering Ratio from 17 July 2012

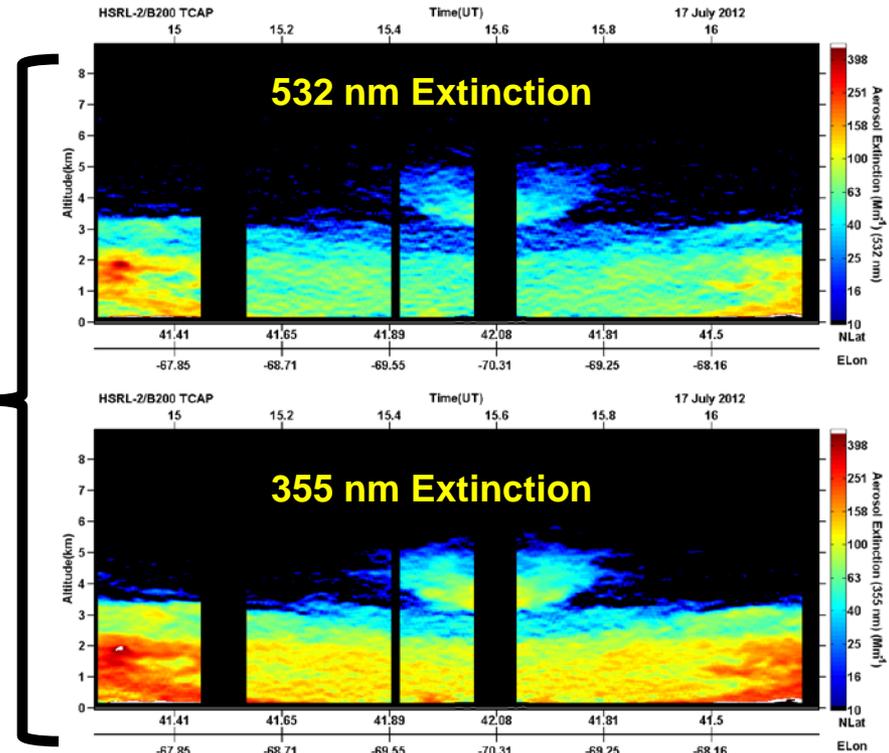

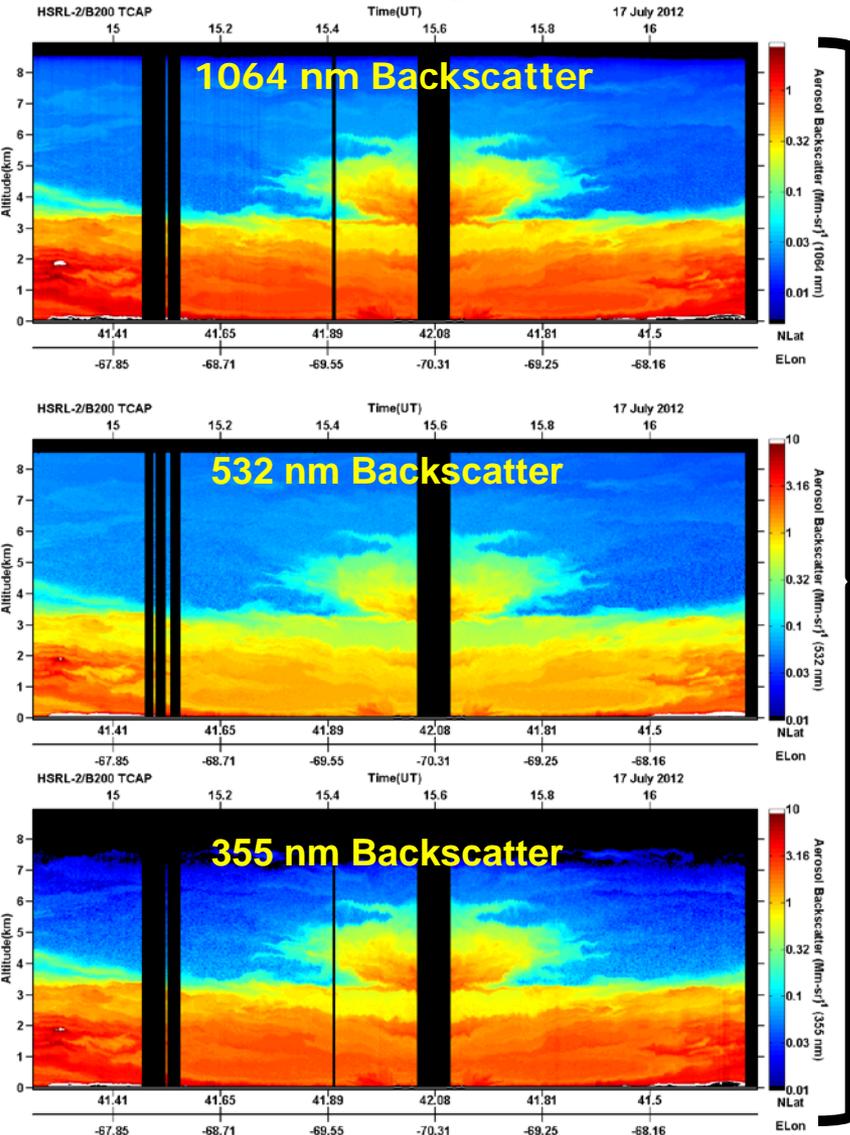

Airborne multi-wavelength "3 β +2 α " HSRL measurements from the TCAP field campaign

07/17/2012 TCAP flight on B200 aircraft

- High Spectral Resolution Lidar (HSRL) provides independent retrievals of aerosol extinction and backscatter
- HSRL-2 Capabilities
 - Backscatter at 355, 532, and 1064 nm
 - Extinction at 355 and 532 nm (HSRL)
 - Depolarization at 355, 532, 1064 nm

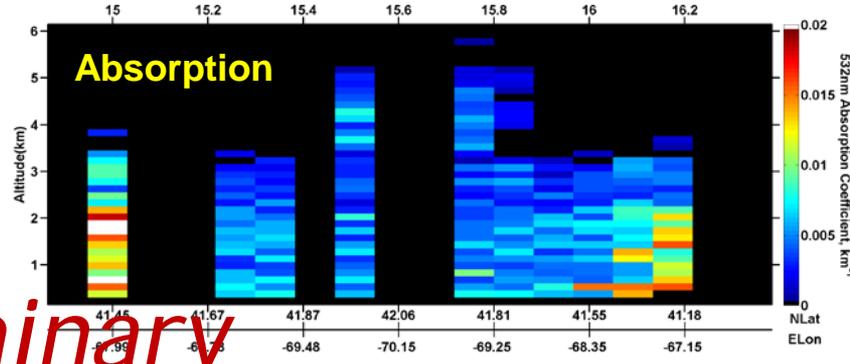

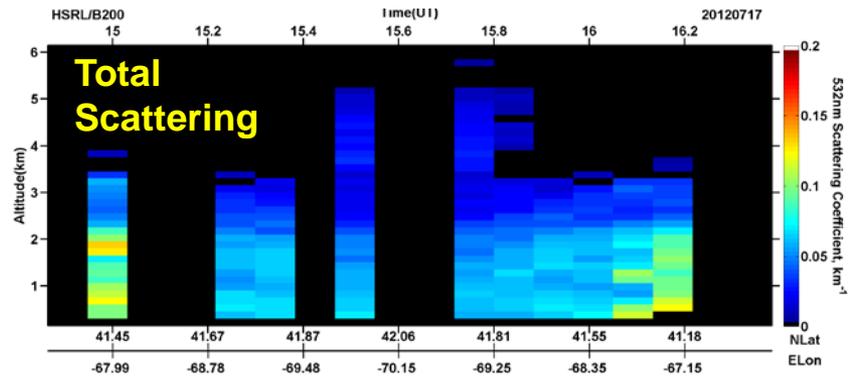

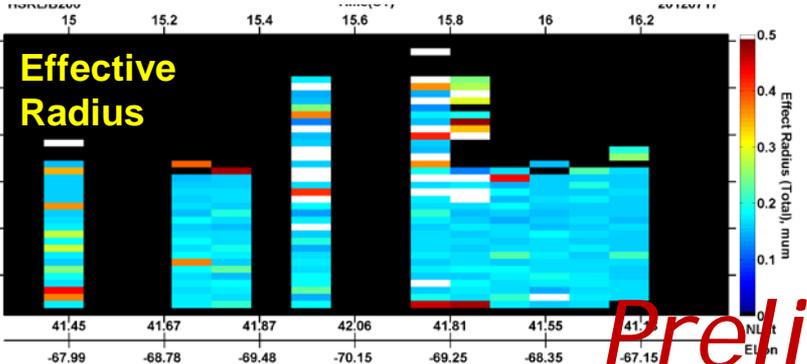

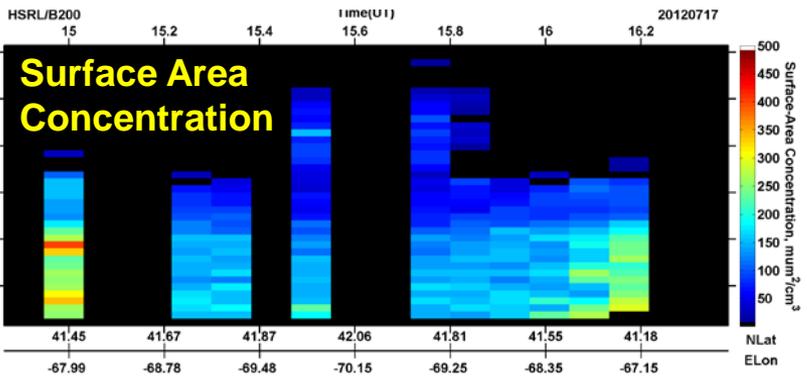

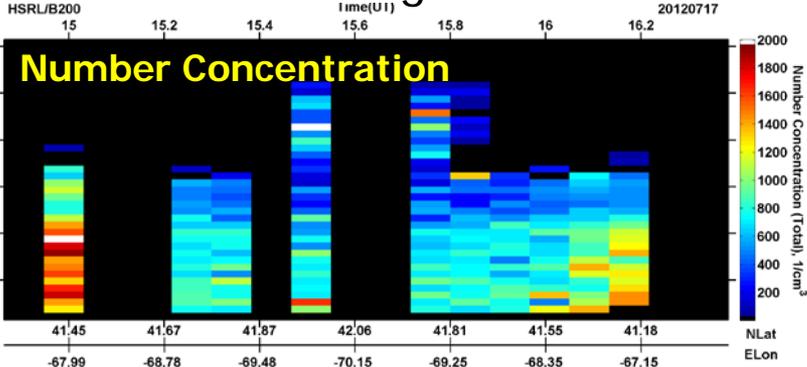

HSRL-2 "3β+2α" Microphysical Retrieval

07/17/2012 TCAP flight on B200 aircraft

- Inversion with Regularization (Muller et al. 1999, Veselovskii et al 2002)
- Produces horizontally and vertically resolved curtains of microphysics including:
 - Effective radius – Complex index of refraction – Scattering coefficient – Absorption coefficient – Single scatter albedo – Number, Surface and Volume Concentration

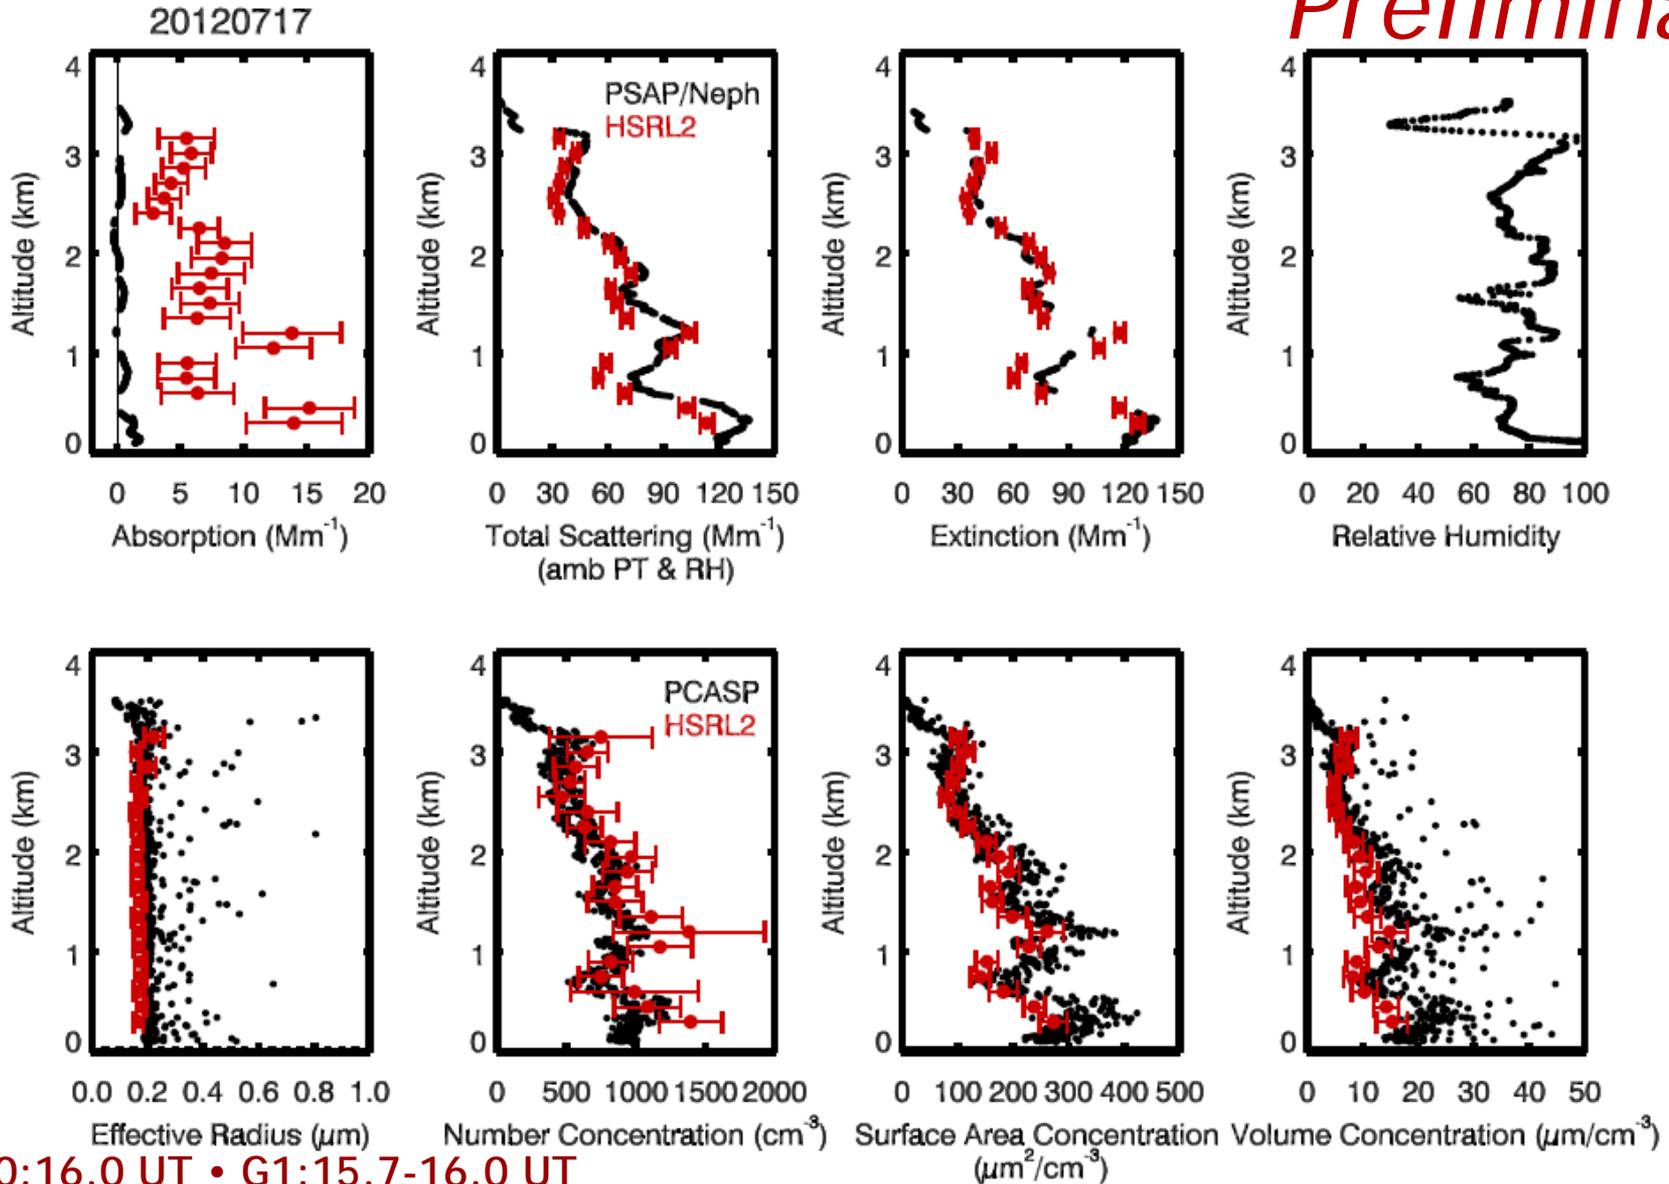

Preliminary

HSRL-2 Microphysics Comparison with G1 In Situ

17 July

Preliminary

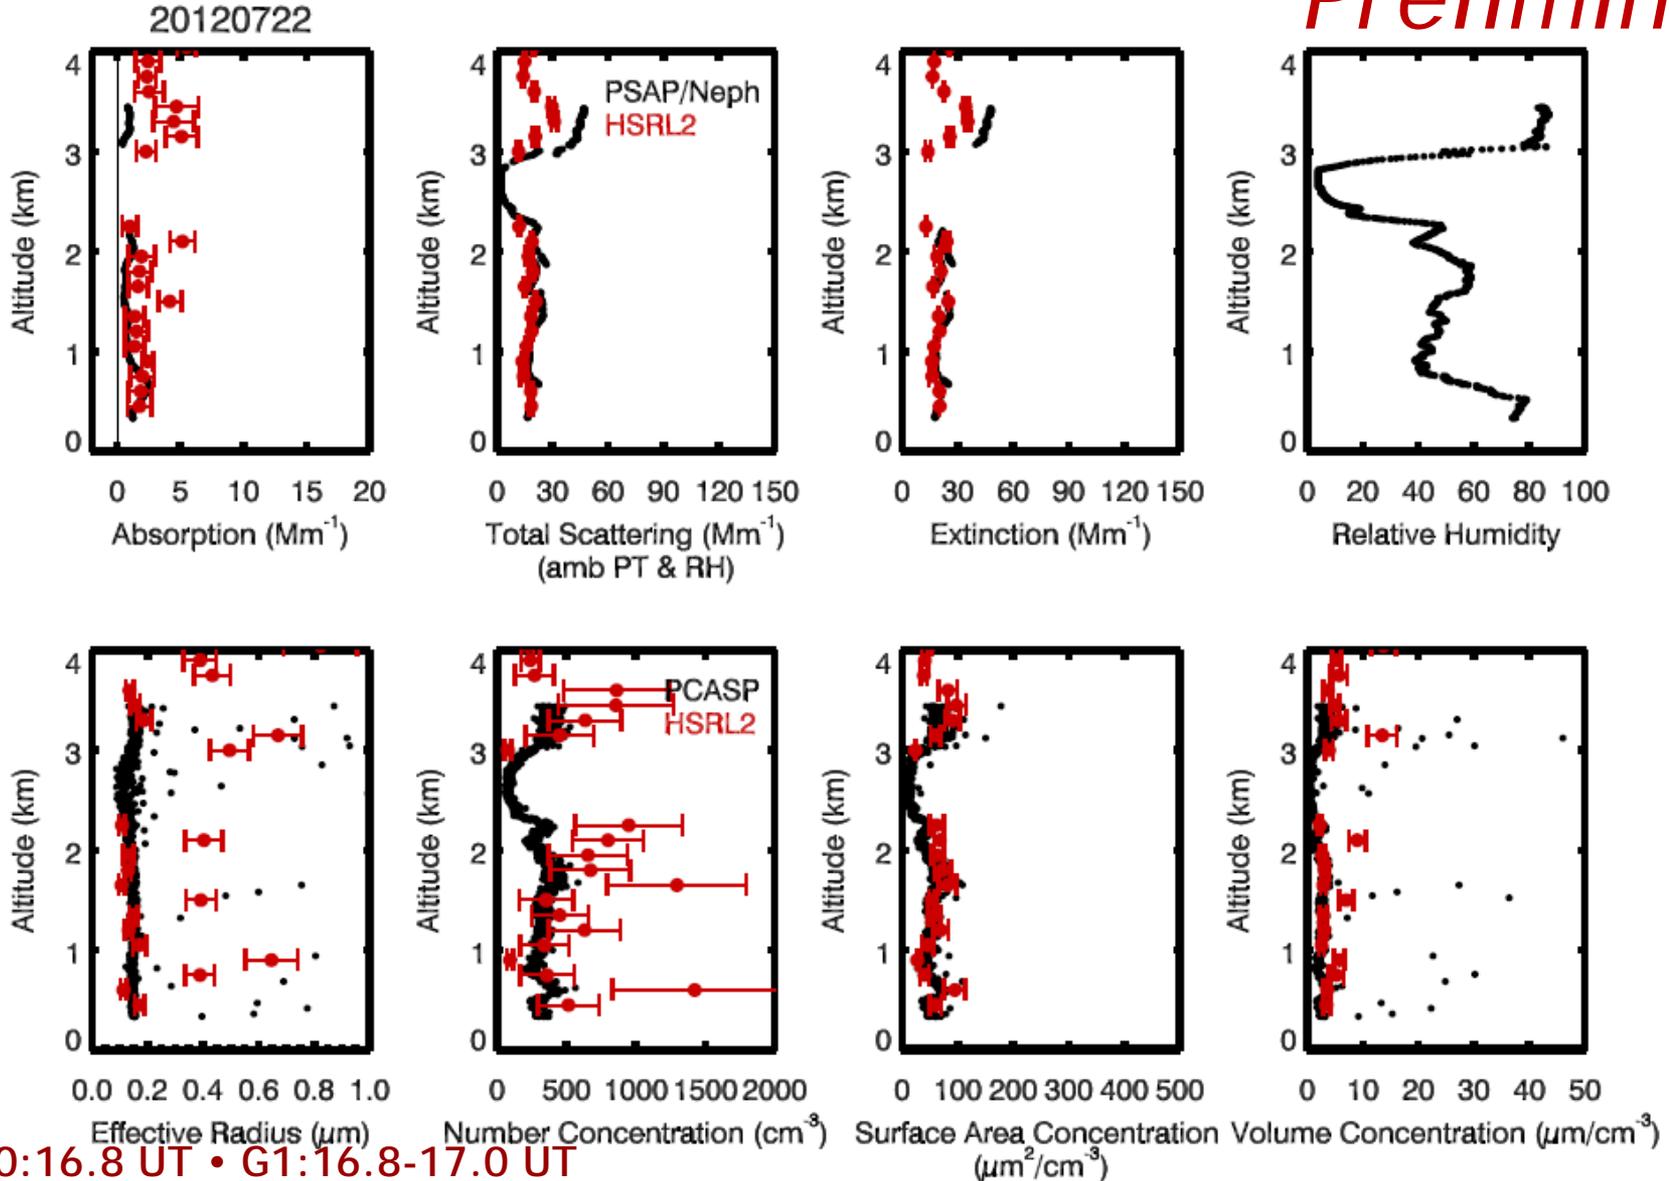

B200:16.0 UT • G1:15.7-16.0 UT

HSRL-2 Microphysics Comparison with G1 In Situ

22 July

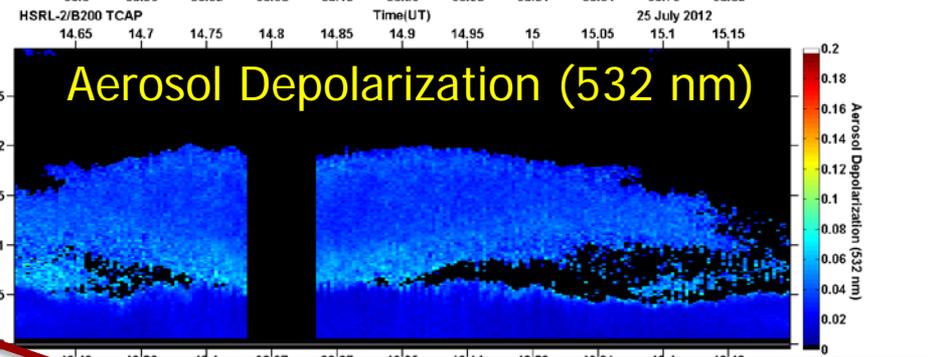

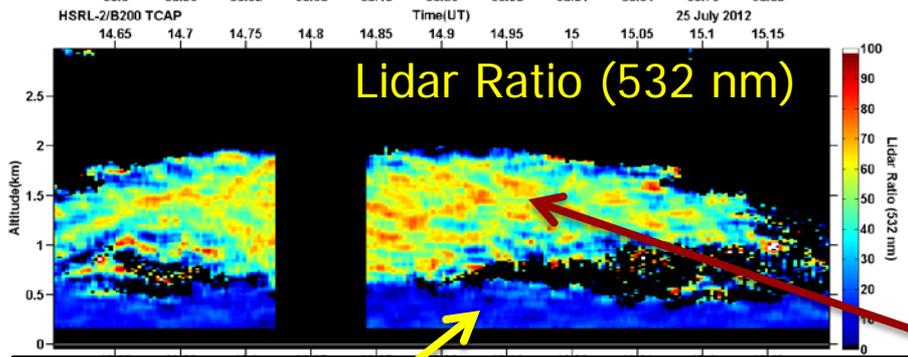

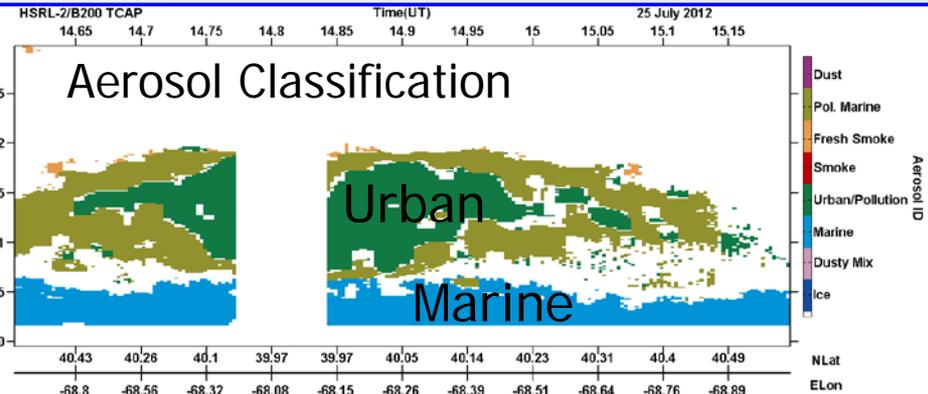

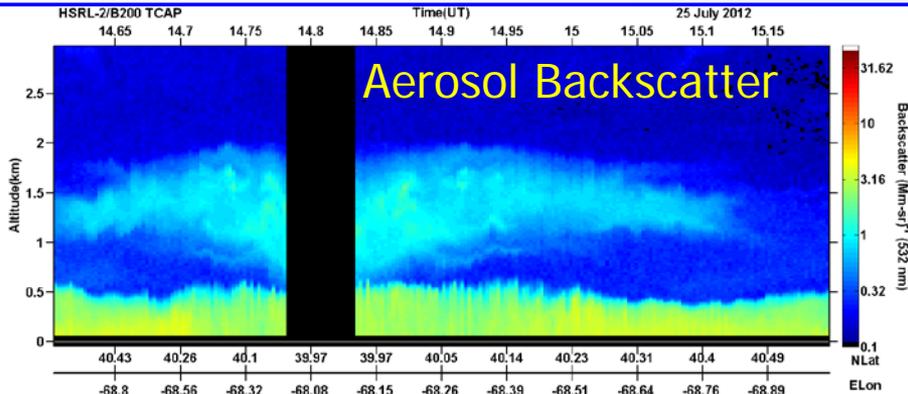

Preliminary

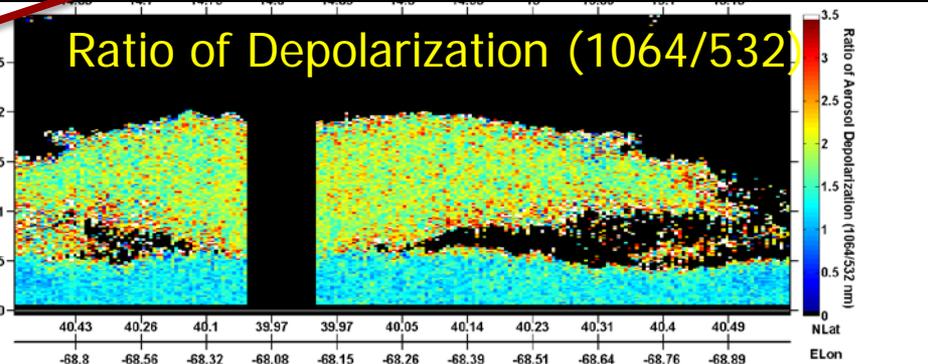

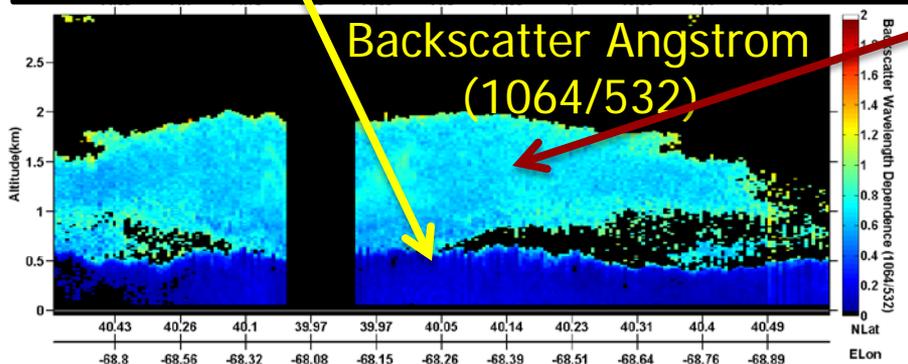

B200:16.8 UT • G1:16.8-17.0 UT

HSRL-2 Aerosol Classification 7/25

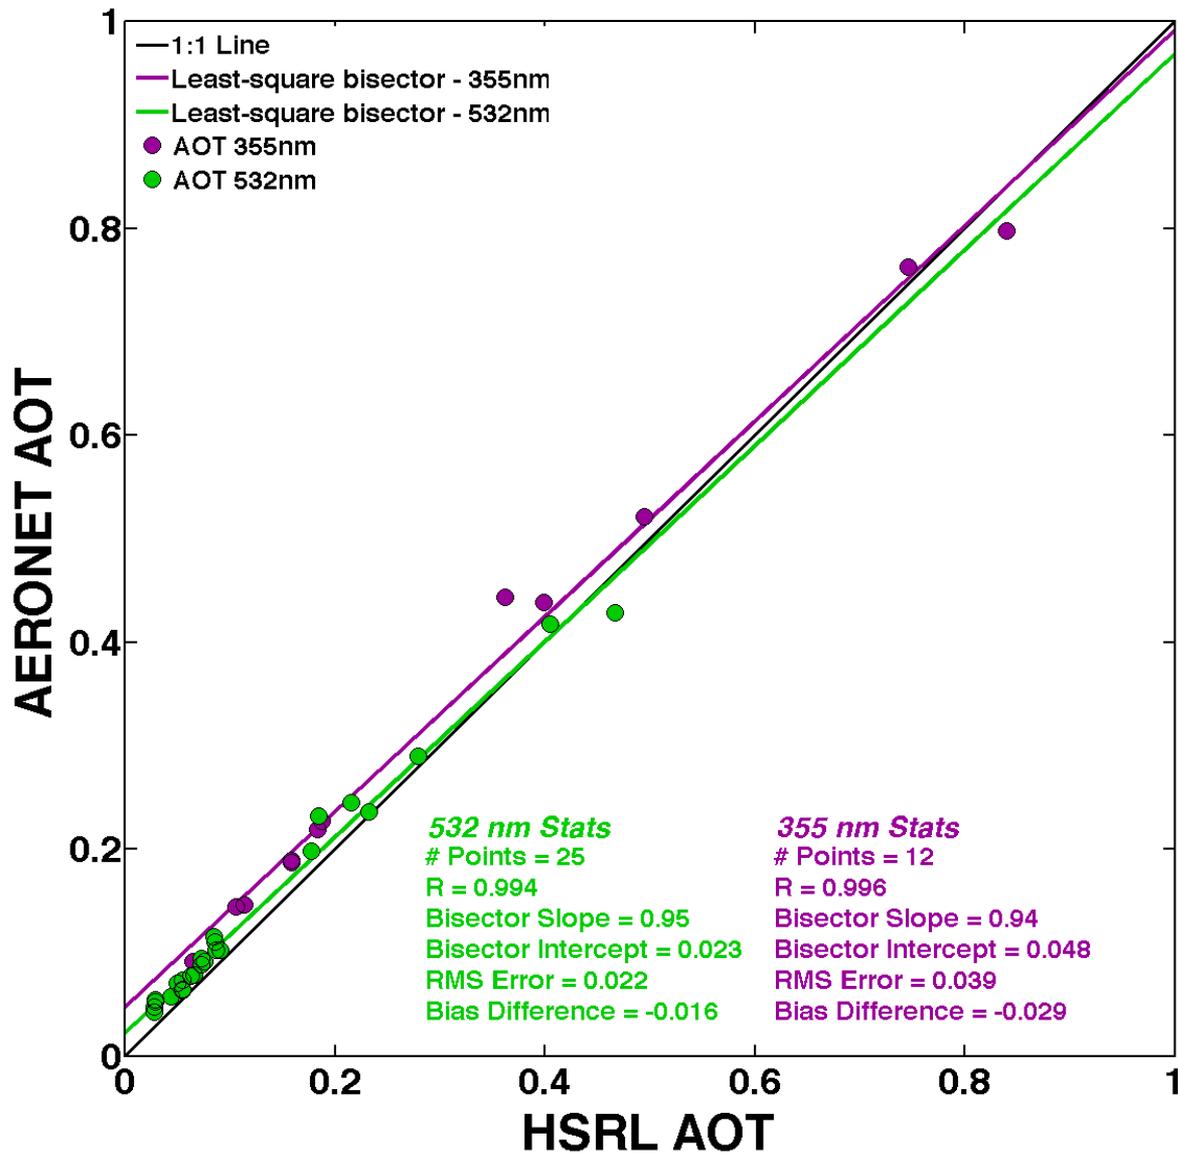

Marine indicated by low lidar ratio and small backscatter angstrom (large particles)

Urban outflow indicated by high lidar ratio and larger backscatter angstrom (smaller particles)

HSRL and AERONET AOD Comparison

- Data points from when HSRL was within 15 km/30 min of the AERONET sites
- AERONET is Level 1.5 Data
- Bias Diff is HSRL-AERONET

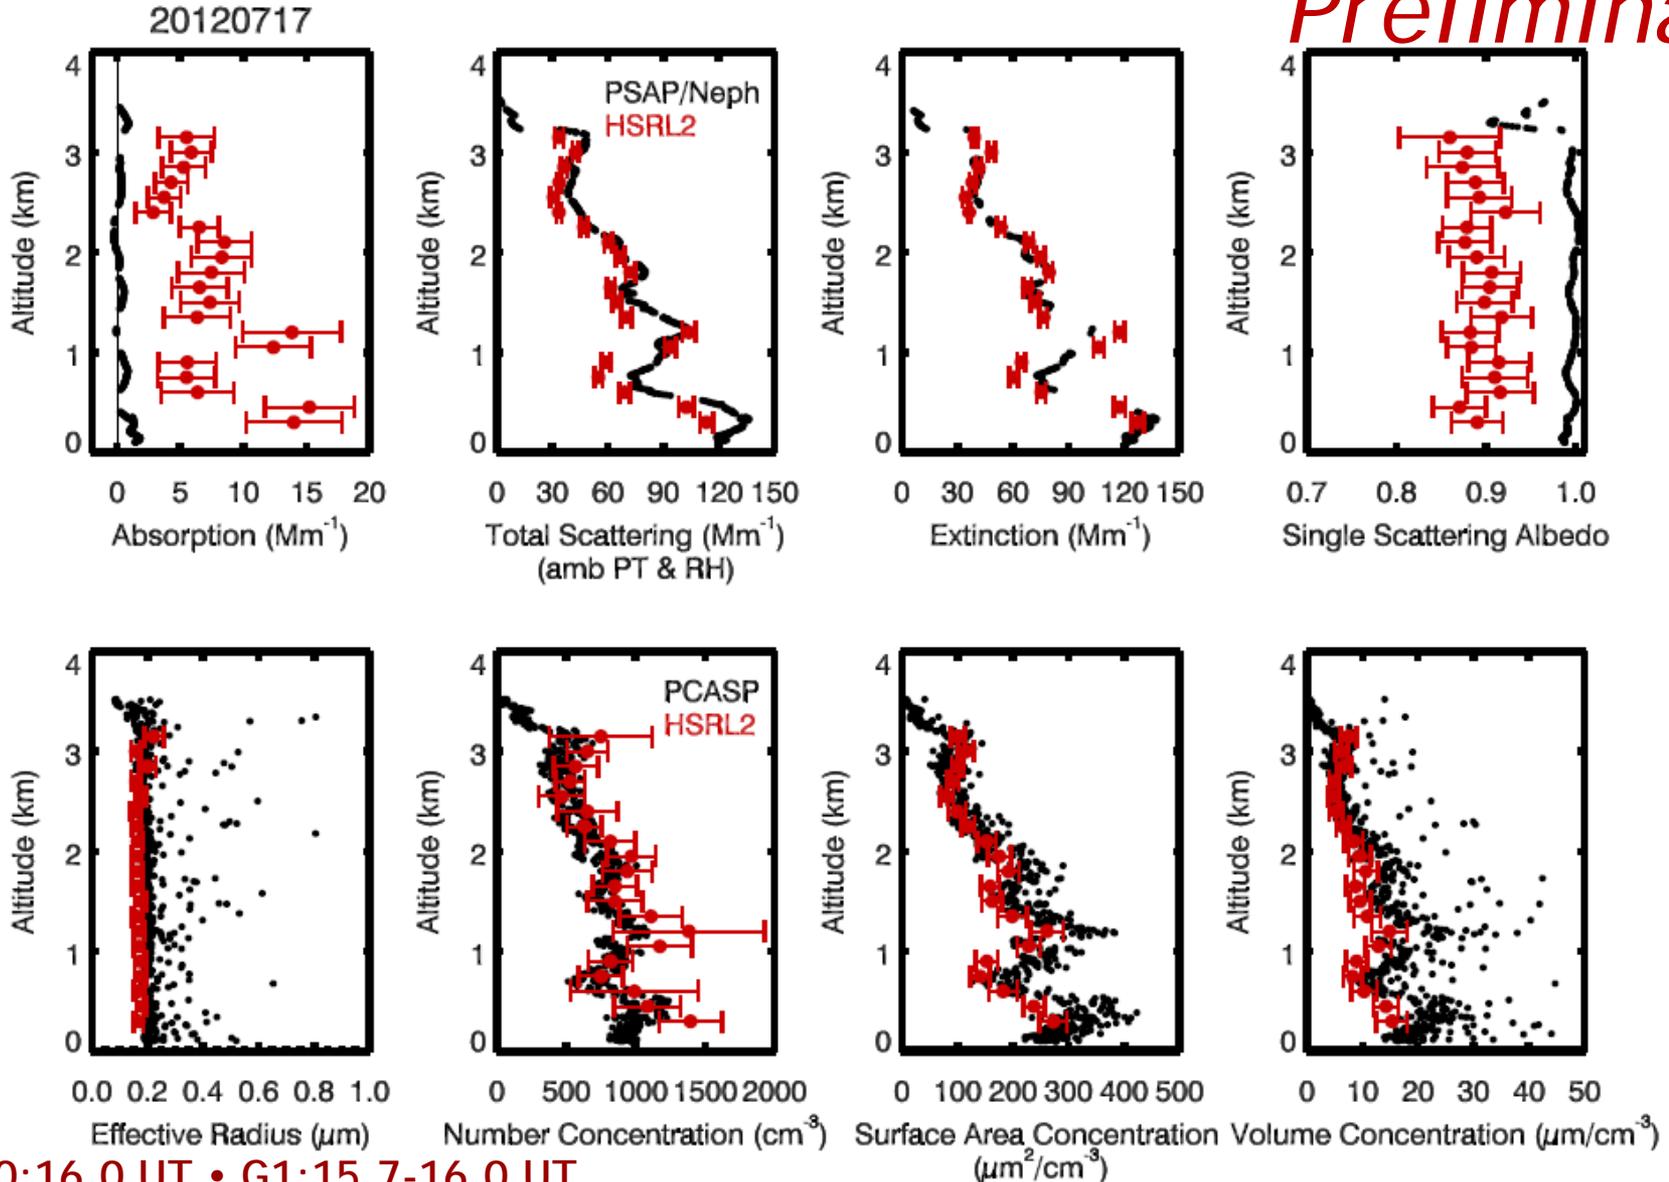

Distance	15km / 30min	
Wavelength	355	532
# Points	12	25
R	0.996	0.994
Intercept	0.048	0.023
Slope	0.94	0.95
RMS Error	0.039	0.022
Bias Diff	-0.029	-0.016

HSRL-2 Microphysics Comparison with G1 In Situ

17 July

Preliminary

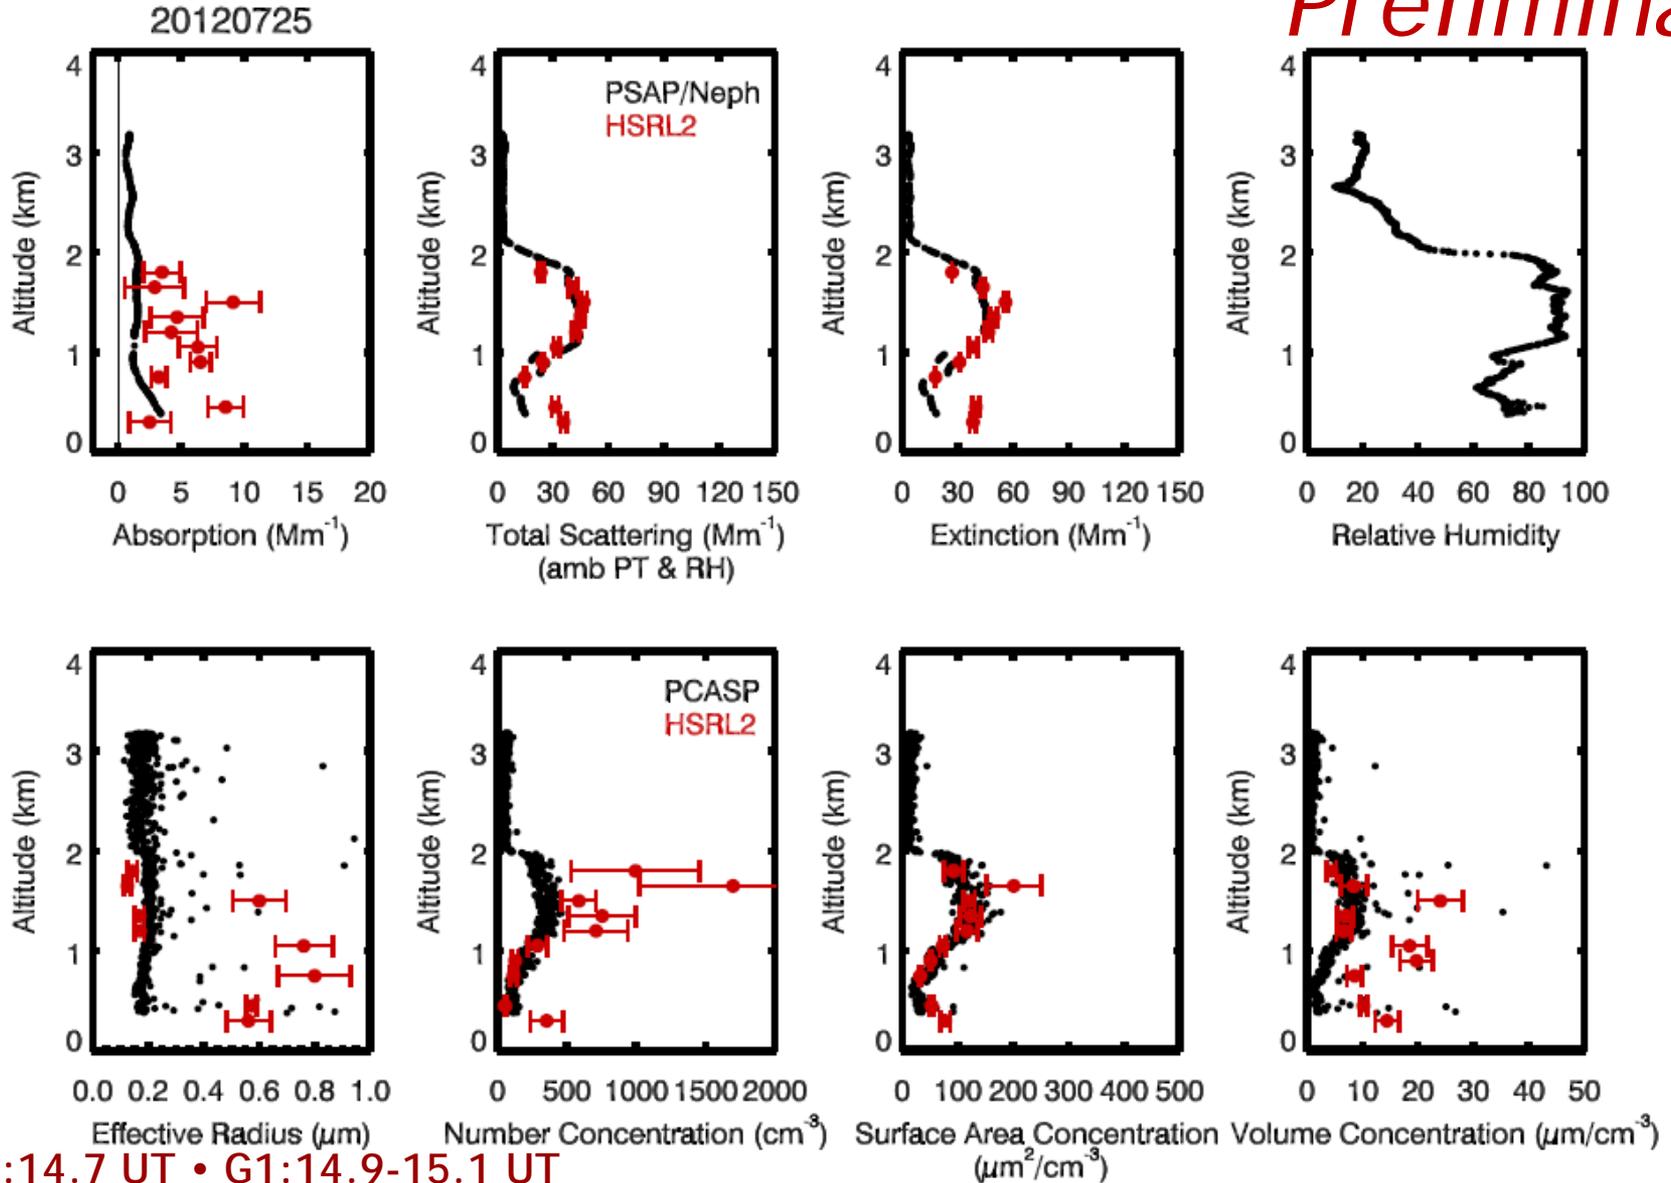

B200:16.0 UT • G1:15.7-16.0 UT

HSRL-2 Microphysics Comparison with G1 In Situ

25 July

Preliminary

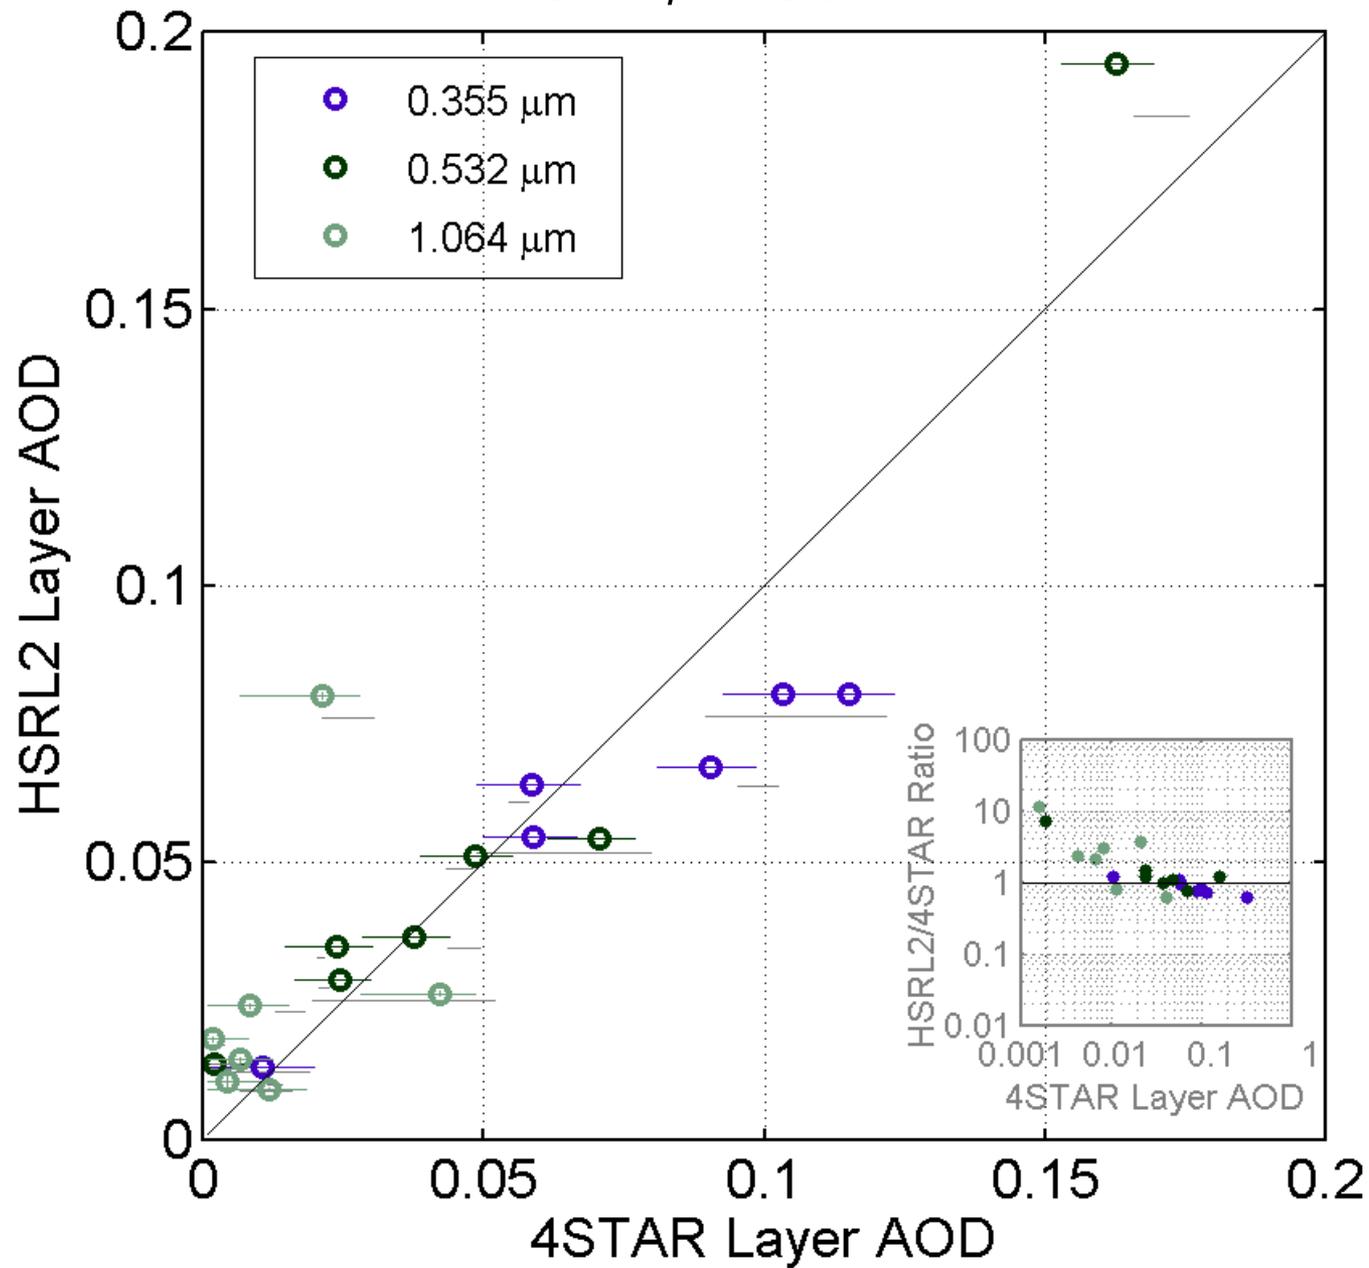

B200:14.7 UT • G1:14.9-15.1 UT

TCAP 4STAR Vertical Profiles

The 4STAR Team and Collaborators
Figures generated by Yohei Shinozuka

20km, +/-30min

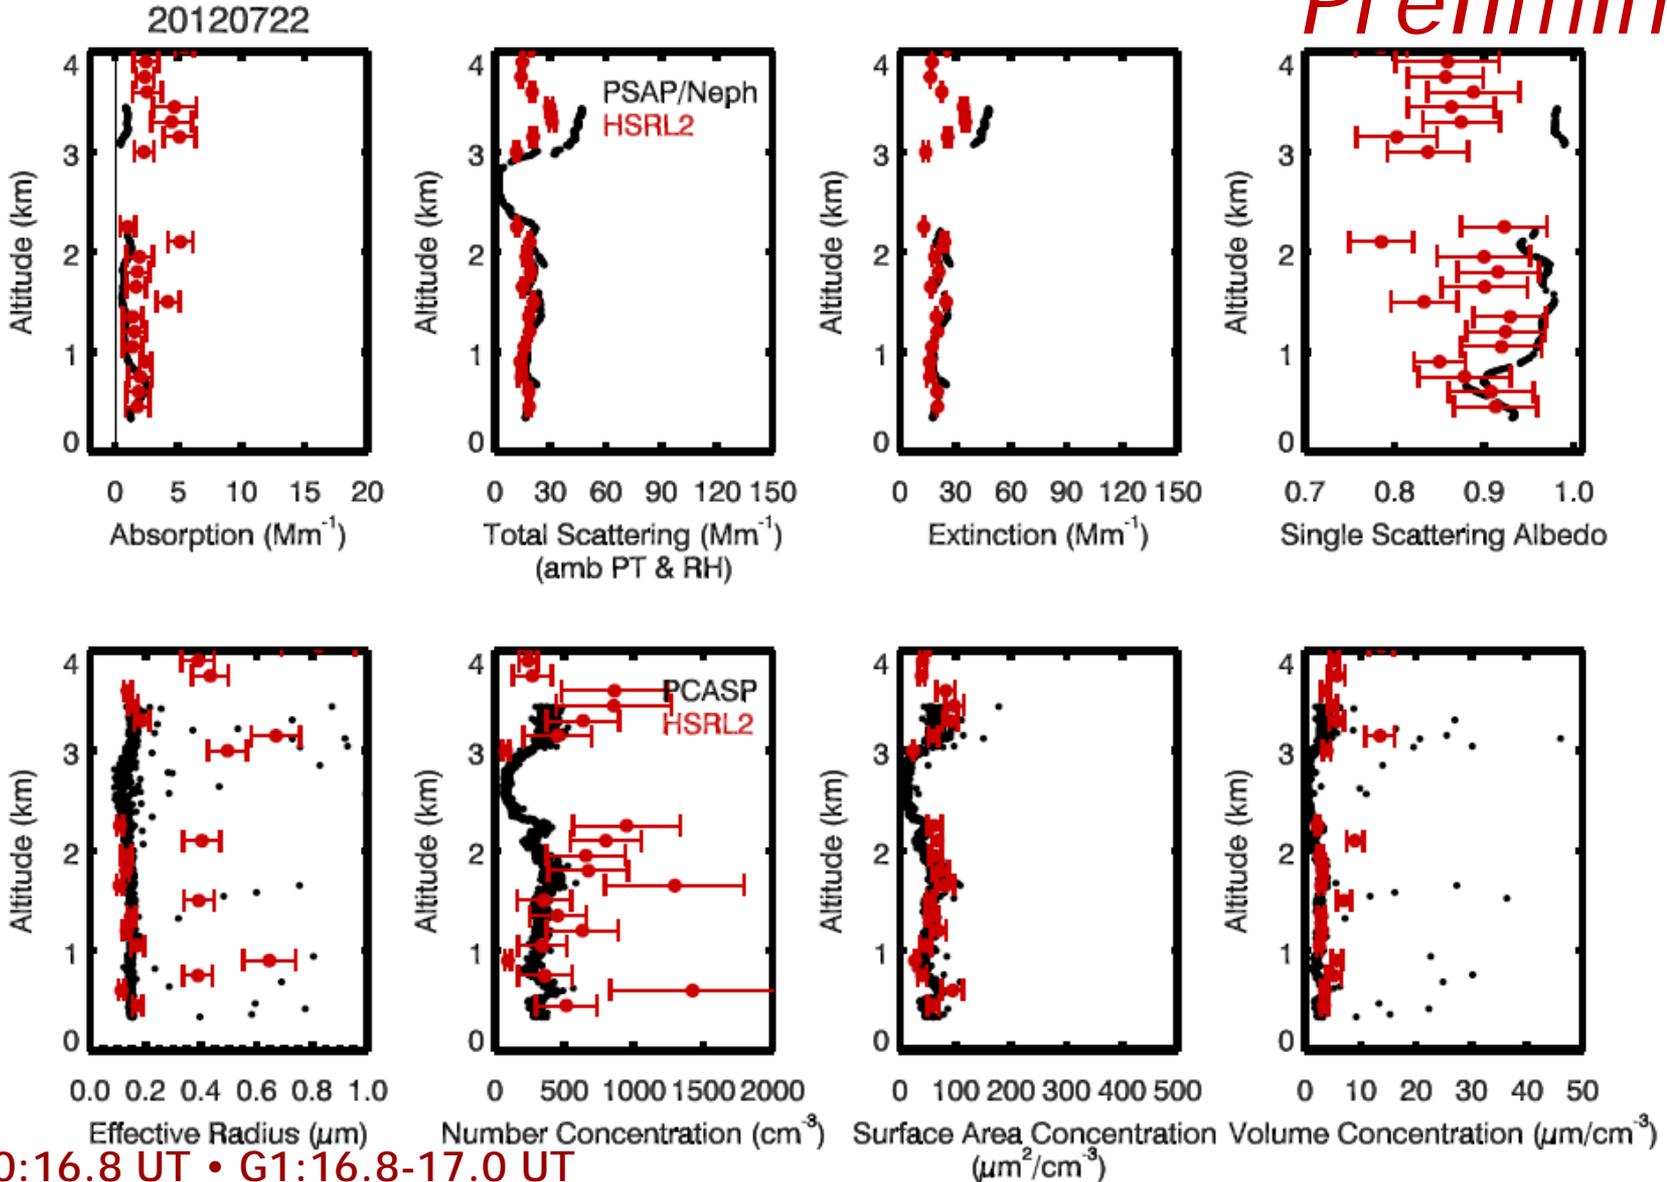

HSRL-2 Microphysics Comparison with G1 In Situ
