MOSAIC Box Model as a Potential Test Bed for SOA Processes

Rahul Zaveri

2018 ARM/ASR Principal Investigator Meeting, March 19 – 23

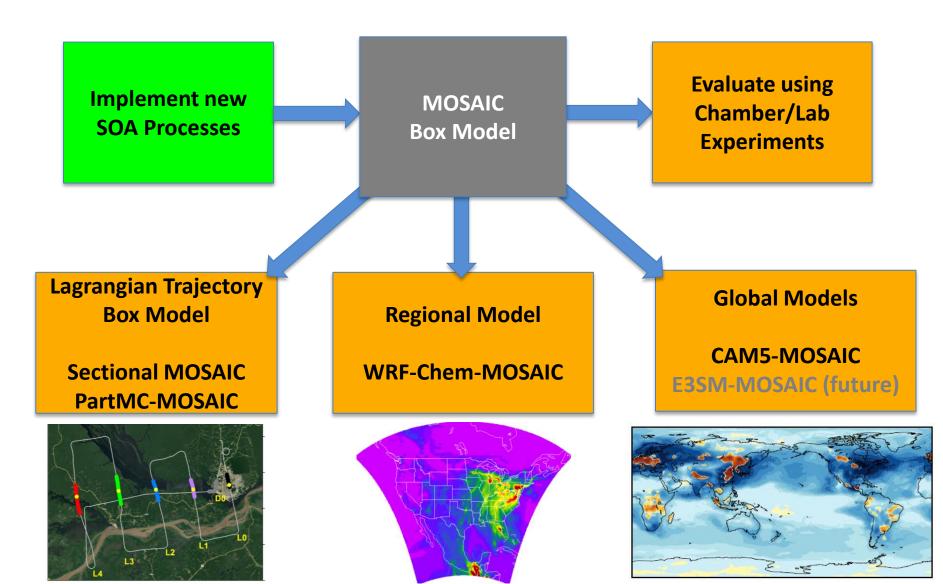

MOSAIC Framework

Gas-phase Photochemistry Dynamic Gas-Particle Partitioning Sectional Predict **HCI** NH₃ HNO₃ **Dynamics CCN** Spectra Organics H₂SO₄ H⁺ OH- NH_4^+ Predict Cl-**Optical Properties Nucleation** Na⁺ NO₃⁻ Solid Ca²⁺ Salts SO₄-Org OM, BC H₂O **Cloud Activation** and Chemistry Aqueous Phase Coagulation Particle-phase thermodynamics and kinetics

Box Model Test Bed

Collaboration between ASR Scientists and Beyond

- 1) Implement and evaluate recently developed SOA processes within Lagrangian trajectory box model and/or regional WRF-Chem model.
- 2) Develop and evaluate new treatments using existing/new chamber/lab experiments
- 3) Make new and well tested developments in MOSAIC easily accessible to other groups via:
 - DOE E3SM
 - NCAR CAM5
 - NASA GEOS5 and GEOS-Chem
 - EPA CMAQ
 - Canadian GEM-MACH
 - Japanese CTM
