

How ARM meets the needs of ASR Science Goals

A LASSO-esque Perspective **Andy Vogelmann**

A LASSO-esque Perspective

- *What is ARM doing well to support your research and what could be improved?*
 - Benefactor of ARM focus – Thank you all!
- *What are critical data/measurement needs to support current ASR sciences? Data uncertainty?*
 - Higher-level data consistency checks
 - New instruments/retrievals need *a lot* of time for vetting
- *How can ARM improve data support in process studies and GCM development activities?*
 - “Integrator” activities
 - Code sprint
- *How to balance the effort spent on continuous long-term routine data processing and VAPs for short-term field campaigns?*
 - Scenarios/Expansion wind up needing both
